

**ROMANIAN SOCIETY OF
MEDICAL INFORMATICS**

ACTIVITY REPORT

2024

ROMANIAN SOCIETY OF MEDICAL INFORMATICS

RSMI

- is a *scientific, professional* and *non-governmental* organisation.
- aims to promote active *research* and *development* of the health informatics community in academic, commercial and medical fields both at home and abroad.

SCIENTIFIC EVENTS

Organise scientific and professional conferences and symposia

NETWORKING

Promotion of scientific and professional contacts at national and international level with similar organisations

RESEARCH

- Lead research - e.g. healthcare literacy
- Conduct research - e.g. digital and virtual twins
- Participate in research - digital health

TRAINING

- Digital Literacy
- Digital Health(care) Literacy
- Scientific Literacy
- Security Challenges in Healthcare
- Artificial Intelligence in Healthcare

EXPERTISE

- Healthcare informatics
- Medical data management
- Digital health

RSMI JOURNEY

2024

SCIENTIFIC EVENT - ORGANIZER

1st jRoMedINF 2024

13 – 14 May 2024

Reviving Our Voice: The Return of EFMI Inside

After a year-long hiatus,
we are delighted to announce
the return of the
= EFMI Inside = our Annual Newsletter

George Mihalas
Editor-in-Chief

This publication has always been a cornerstone of our community, providing valuable insights, updates, and a platform for sharing the incredible work of our members. It has been initiated during the EFMI presidency of Catherine Chronaki (Belgium, Greece), having our enthusiastic colleague, Izet Masic (Bosnia Hercegovina) as first Editor-in-Chief.

The past year has been a period of reflection and rejuvenation for our team. We took this time to evaluate how best to serve you, our esteemed members, and ensure that our newsletter remains a vital resource in our professional journey together.

We continue the traditional general content of the previous editions, introducing a structural organization by sections, each of them coordinated by a guest editor and expanded the range of topics, introducing articles on

opinions as well as some sequences from some special words from our previous meetings.

This edition features three special sections:

EFMI Institutional Members (Edited by Lars Lindskold)

EFMI Projects (Edited by Lacramioara Stoica-Tivadar and Patrick Weber)

EFMI Events (Edited by Paris Gallos)

In this renewed edition, you will find a wealth of information, including the latest research highlights, member achievements, upcoming events, and much more. We have worked diligently to bring you content that not only informs but also inspires and connects us all.

Thank you for your patience and continued support. We hope you enjoy this issue and look forward to your feedback and contributions to make our newsletter an even more robust platform for collaboration and communication.

"Back in Print: The Comeback of EFMI Inside"

Thomas Deserno
- EFMI President

George Mihalas
- EFMI Inside
Editor-in-Chief

Thomas M. Deserno

George Mihalas

We are excited to announce the revival of our society's newsletter, "EFMI Inside." This newsletter is a collective creation, relying heavily on the valuable contributions of our members. Starting with this issue, we have introduced "section guest editors," who will curate content on specific topics.

The newsletter offers a diverse range of content, including traditional messages from EFMI Board members, opinions, and excerpts from occasional speeches. Additionally, we have dedicated an editorial to the contributions of Izet Masic, the first editor-in-chief of EFMI Inside.

Looking forward, we aim to further develop the section dedicated to EFMI Working Groups. We also anticipate more opinions, book reviews, and updates from national societies regarding their conferences, journals, and other notable activities.

Digital Health Technologies in Oncology

Message from the Guest Editor

Digital health technologies have started to play a fundamental role in healthcare by enhancing patient diagnosis and (remote) monitoring, streamlining processes, enabling precision medicine with data analytics, and improving healthcare access through telemedicine. As the healthcare landscape evolves, digital innovations are transforming cancer care, from early detection to precision treatment, monitoring and patient support. We invite researchers, clinicians, and technologists to share their insights, studies, and innovations in digital health technologies applied in cancer management. Topics of interest include but are not limited to AI-driven diagnostics, telemedicine, wearable devices, and data analytics. Do not miss this opportunity to contribute to the advancement of cancer care through digital health technologies. Submit your cutting-edge research today and shape the future of oncology.

În vederea traducerii în limba Română a chestionarelor HLS19 pentru măsurarea alfabetizării digitale despre sănătate în populația generală avem nevoie de ajutorul dumneavoastră în evaluarea clarității **instrucțiunilor**, a **itemilor** și a **posibilităților de răspuns** ale traducerilor.

Vă rugăm evaluați fiecare din următoarele elemente pe o scală Likert de la 1 la 4:

* **Relevanța conținutului:** 1 = "nerelevant", 2 = parțial nerelevant, 3 = parțial relevant și 4 = "foarte relevant".

* **Claritatea:** 1 = neclar, 2 = parțial clar, 3 = clar, 4 = foarte clar.

* **Necesitatea:** 1 = neesențial, 2 = parțial neesențial, 3 = parțial esențial, 4 = esențial.

Avem nevoie de ajutorul dvs. în evaluarea a patru instrumente: HLS19-DIGI-RO, HLS19-NAV-RO, HLS19-COM-P-Q11-RO și HLS19-COM-P-Q6-RO.

1-3 December 2024

Open Digital Health Summit '24

Join us in Nairobi, Kenya, Dec 1–3, for the inaugural Open Digital Health Summit, "Accelerating Full-STAC on FHIR" to explore how the convergence of Open Standards, Technologies, Architectures and Content (the "full-STAC" approach) is FHIR'ing up the global digital health landscape.

Nairobi, Kenya

3 days of high impact sessions over 2 tracks

Dive into a 3-day experience designed to inspire, educate, and empower digital health professionals with "Building with FHIR" track and "DPIs for Health" tracks

Boost your knowledge and skills

Build skills through hands-on workshops with global experts from Google Health, HL7 FHIR, WHO, ITU and leading global digital health organizations

Connect with the ecosystem

Network with peers and thought leaders from across the globe during the day and into the evening

Building with FHIR

For digital health developers, innovators and product teams interested in learning how to build with FHIR

- [FHIR Fundamentals](#) from HL7 experts incl. Grahame Grieve, the 'father of FHIR'
- Get hands-on building with [Open Health Stack](#) (from the Google team, Ona, IntelliSOFT and other experts)
- Hybrid approaches and leveraging FHIR in existing digital health solutions (from Medic, OpenMRS, Medtronic Labs and others)
- How to leverage GenAI for accelerating development and driving innovation

And more

[Download Program](#)

DPIs for Health

For Government Digital Architects who are designing national architectures that leverage standards and digital public infrastructure (DPI) for digital health transformation.

- Introduction to DPI for Health from experts across WHO, ITU and others
- How to leverage interoperability standards to upgrade national approaches
- Architecting national systems using cross-sectoral and health-specific DPIs and health information exchange to achieve specific goals, e.g. personal health record for all citizens, quality and continuity of care and optimizing supply chain.

And more

[Download Program](#)

What is the "full-STAC remedy" for global digital health

[Read The Paper](#)

Today, an unprecedented convergence of four factors, Open Standards, Open Technologies, Open Architectures and Open Content are poised to help accelerate standards based digital transformation for health.

Open Standards

Semantic and Syntactic models for data representation, exchange, and processing that ensure the precise meaning of exchanged information is unambiguously interpretable by any other system, service or user. Open standards are developed and maintained through collaborative, consensus-driven processes, and are freely available for use and adaptation without license restrictions e.g. Shared FHIR Profiles with standard ontologies

Open Content

Representations of public health, health system, or clinical knowledge, which are developed to meet the business needs described by an open architecture and which describe, using open standards, assets such as minimum datasets, decision-support logic, care protocols, performance metrics, workflows, and reporting templates. Open content is developed, validated, and maintained through expert communities, and is freely available for use and adaptation without license restrictions e.g. WHO SMART Guidelines FHIR Implementation Guide.

Open Technologies

Modular standards-based, and accessible software tools that help developers and users to collect, store, and transmit or analyze data represented in open standards. Open technologies are developed and maintained through transparent, community-based processes and are licensed under an open source software license e.g. Open Health Stack Android FHIR SDK to build FHIR Native Mobile Apps

Open Architecture

Documentation using open standards, of reusable enterprise architecture patterns for health systems, describing the diverse digital interconnections of systems and capabilities (including trust networks, services, registries, access controls). Open architecture are designed to be instantiable via open technologies; provide a core infrastructure that fosters an ecosystem of digital health tools; are developed and maintained through collaborative consensus-driven processes; and are freely available for use and adaptation without license restrictions e.g. OpenHIE Architecture

13 June 2024

Copenhagen, Denmark

Launch of the Strategic Partners' Initiative for Data and Digital Health

13 June 2024 | Copenhagen, Denmark

WHO/Europe is all set to launch its first-ever Strategic Partners' Initiative for Data and Digital Health (SPI-DDH) in Copenhagen, Denmark, on 13 June 2024. This newly established initiative will commence its collaborative work to identify and address gaps in data and digital health ecosystems to help to build safe, affordable and person-centred health systems in the WHO European Region.

Consultare publică - Strategia Națională de Digitalizare în Sănătate 2024-2030

Într-o lume din ce în ce mai digitală, stimulată de progresele tehnologice, de investițiile economice și de schimbările sociale și culturale, devine tot mai clar faptul că, în mod inevitabil, sectorul sanitar trebuie să integreze TIC în modul său de funcționare. Acest lucru este valabil indiferent dacă obiectivul este acela de a oferi tuturor cetățenilor îngrijiri de înaltă calitate, echitabile și sigure, sau de a îndeplini obligațiile de cercetare în domeniul sănătății publice, de raportare și de acțiune umanitară.

Asociația Societatea Română de Informatică Medicală

SRIM este o organizație științifică, profesională și non-guvernamentală. SRIM își propune să promoveze cercetarea aplicativă și dezvoltarea comunității de informatică medicală în domeniile academic, socio-economic și medical, atât în țară, cât și în străinătate.

Completează, semnează și trimite formularul 230 online.
Echipa organizației se va ocupa să depună formularul la ANAF.
